## Code Exercise:
# Frontend
# Web Developer

Check out klaviyo.com/features/integrations. This exercise is to build a very basic version of this interaction using the trimmed down wireframes below.

Don't worry about matching colors and fonts exactly to the wireframes, but feel free to add any additional ideas you have on how the user interactions should work. For example: what happen when you open a tile with one already open?

We're interested in learning about what you did, so please walk us through your thinking!

## WITH BLOCKS UNFILTERED (DEFAULT STATE):

**INTERACTION NOTES:**
A user should be able to filter the blocks by color using the menu.

There are 3 block sizes.

When you hover on a tile there is a drop shadow.

**WITH TILE OPEN:**

FILTER TILES:

| All | Black Tiles | Blue Tiles | Yellow Tiles |

# This is a blue tile

X
